**Subject:** Charleston WV Chemical Leak

<http://www.wvgazette.com/News/201401120056>

what I thought was useful in the article about what companies are tied to Freedom Industries is listed below.

"

Within the last two weeks, on Dec. 31, 2013, Freedom merged with three other companies, Etowah River Terminal, Poca Blending and Crete Technologies.

The companies were already interrelated. Freedom markets and distributes chemicals that are mixed by Poca Blending in Nitro. Etowah River Terminal is the storage facility on the Elk which leaked the chemical. It has about a dozen tanks, each of which can hold tens of thousands of gallons of chemicals. It was formerly a Pennzoil facility."
